

THE SUSTAINABLE HOUSE PROJECT

The Meeting Place has been undergoing a sustainability retrofit and will be open to the public for guided tours from February 2010. Environmental courses will run each term to compliment the retrofit and promote sustainable living practices that can be achieved by everyone. This term Roy Lewisson will facilitate Retrofit Your House, a four week course guiding you through practical options to make your house more sustainable and Dr Maggie Lilith will take you through Smart Garden Design where you will learn new skills to set up and develop a productive organic garden. The Meeting Place has been fitted with an underground rain water tank, photovoltaics, a new roof, solar hot water,

window treatments, fans and solar tubes for lighting. Signage inside and outside the building will be prominent to highlight each fitting and explain its benefits... For more information on the tours and courses, see the program guide inside for enrolment information, dates and times.
